**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Hiroshi et al. (Hiroshi), JP 2000-000262).

Regarding claims 1-11, Hiroshi discloses an auxiliary guiding device for the blind, comprising: a guiding brick embedded with an electronic tag including a memory chip and a first antenna connected to the memory chip, wherein the memory chip stores guidance information which can be read or written; a reader having a radio frequency transceiver module, a second antenna and a microprocessor, wherein the radio frequency transceiver module transmits radio waves to the electronic tag through the second antenna to trigger the electronic tag to transmit guidance information to the radio frequency transceiver module whereby the microprocessor then converts the guidance information to digital data; a text-to-speech (TTS) component having an input terminal of digital data for converting the digital data transmitted by the microprocessor to analog signals, such that the analog signals drive a sound generating component and the inputted digital data are broadcasted by means of speech; and a power supply unit for providing necessary electric power to the reader and the text-to-speech (TTS) component (pages 1-4 [0005-0026]).

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ito et al., U.S. Patent No. 6,473,704, discloses an information guidance system.

Said et al., US. Patent No. 2004/0218451, discloses an accessible user interface and navigation system and method.

Chung, US. Patent No. 2005/0110640, discloses a medical assistance and tracking method employing smart tags.
